

DMX WINCH 10

DMX-controlled winch for stage use

Small wire winch for dynamic movement of minor stage objects

The Winch 10 is a small winch for lifting your medium size props, screens or drapes inside and outside the stage area.

Several winches can easily be connected as a chain, allowing for advanced and creative ways of making dynamic movements of large items or a number of items.

The winch is controlled by the DMX channels from the lighting desk.

1 channel controls the wanted position, another controls the speed of the movement.

The movements are programmed like the light and in interaction with the light.

Artists and performers all over the world have used the winches as technical devices in making curtains, lamps and other elements move in formation or individually.
